Please contact your Oppenheimer representative to schedule a 1x1 with the company.

About Renexxion LLC:

Renexxion LLC, with a wholly owned Irish subsidiary; Renexxion Ireland Ltd, is a privately held, clinical-stage, biopharmaceutical company committed to delivering new drugs to patients with GI disorders. Naronapride is an oral late-stage potential best-in-class “pipeline in a product” candidate to treat gastrointestinal (“GI”) diseases in the upper and lower GI tract. Naronapride is currently being studied in a Phase 2b gastroparesis trial by Renexxion’s EU partner and is entering a Phase 2b trial in PPI non-responsive symptomatic GERD (PPI-nrsGERD) in the U.S. Naronapride’s unique mechanism of action combines both serotonin 5HT₄ receptor agonistic and dopamine D₂ receptor antagonistic properties, both clinically validated targets. The molecule was designed to be minimally absorbable and locally active in the gut lumen to potentially enhance efficacy and safety. Renexxion is also advancing an additional research program in inflammatory bowel disease (“IBD”).
